

Dr. Martin Fengler, CEO
Meteomatics AG
Switzerland

Dr. Martin Fengler studied at TU Kaiserslautern (Germany) where he received his PhD in applied mathematics. After his studies he developed several numerical weather prediction models for Meteomedia AG (now MeteoGroup Switzerland), where he supervised the technology & innovation department.

In Spring 2012, he founded Meteomatics in St. Gallen, Switzerland:

Meteomatics specializes in weather providing high-resolution regional and global weather data by applying downscaling techniques and drone capabilities. It delivers added value to its customers across multiple sectors by aggregating the latest weather forecast models, observations, radar information, and satellite data into their Weather API. Meteomatics has also developed a high-resolution local weather model that ingests data gathered by its own Meteodrones.
